Ref: F. R. Lockhart ltr (12434) to E. M. Lee, HQ (EM-453) Comments on Solar Evaporation Ponds Documents, October 23, 1992 - EML-157-92

We are transmitting herewith an original and two copies of the response we have received from Halliburton NUS to the HQ EM-453 comments on the Pondcrete Waste Characterization Report. Your letter of October 23, 1992 requested a written response to these comments no later than November 6, 1992. There was apparently some delay in receipt of your letter by the Solar Ponds Program Office and, therefore, an equal delay in requesting response from Halliburton and in receiving that response.

In order to minimize delay in the resolution of your comments, we are transmitting the above-referenced material prior to its review by the Program Office. Our review can therefore take place concurrently with yours and another transmittal of final responses can be effected not later than November 25, 1992.

In view of this approach, please consider the responses transmitted herewith to be preliminary. Also, please be aware that responses to the Pondsludge Processing Design Criteria for Ponds 207 A & B and Clarifier are not included in this transmittal. Halliburton has informed us orally that they agree with the comments made, but have not yet had time to write the appropriate document stating that fact. That final response will also be transmitted to you on November 25, 1992.
